

Innovation and the Internet

29 April 2005

Christopher Buja, Deputy Director

Academic Research & Technology Initiatives, Cisco

cbuja@cisco.com

- **Introduction**
- **Diverse Players in Research**
- **Cooperative Success**
- **The New World of Research Networks**
- **Research Avenues**

Academic Research & Technology Initiatives (ARTI)

Cisco.com

- **National Research Networks (NRN)**
 - Research leadership
 - Operational leadership
- **Research Partnerships**
 - University Research Program (URP)
 - Cisco Applied Research & Development (CARD)
 - Partner Projects
- **Internal and External Research Leadership**
 - Technology Research Councils
 - Distinguished Engineers / Cisco Fellows
 - Acquisitions, internal R&D and standards bodies

Challenge of the Ideal Next Generation Network

Cisco.com

Fusing the Best Properties of Today's Networks onto a Common Lowest Cost Infrastructure

Network-Enabled Application Waves

Cisco.com

Waves

Wave 3
2001–Future

Wave 2
1997–2001

Wave 1
1994–1997

Insertion of
Dynamic Content

Re-Engineering
Business Processes

Static Content

The Switchboard

- Real-time communication
- Enables voice, video, and data

The Back Office

- Integrated operations

The Library

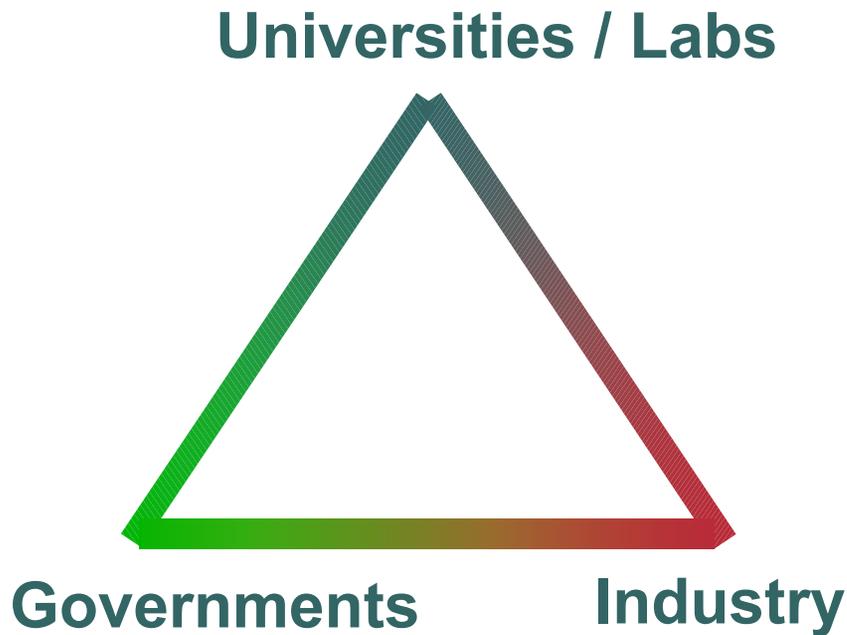

- Information
- Presence

Internet Pace

Multiple Players in Research

Cisco.com

Tensions

- Timeframe
- Measures of Progress
- Profit/Cost/Markets

Resolutions

- Partnerships
- Communication

Successful Partnerships

Cisco.com

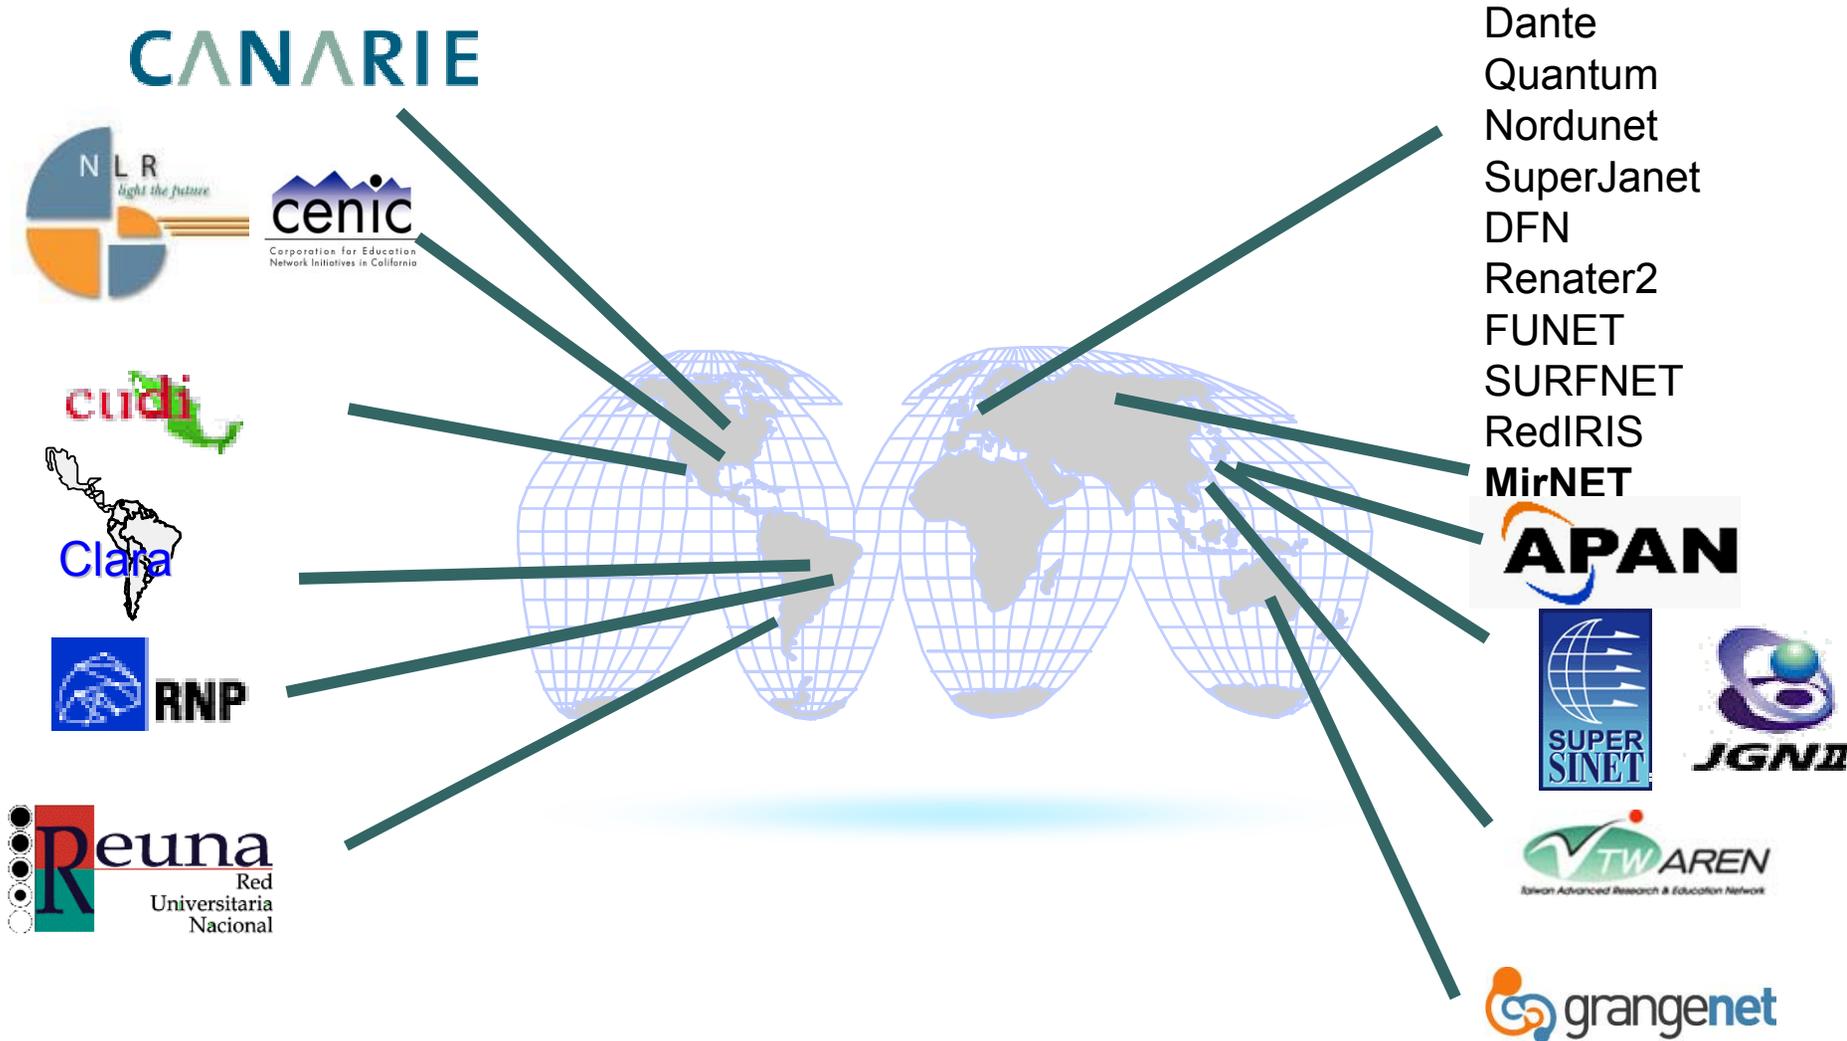

- **Standards Bodies**
- **Centers of Excellence**
- **Conferences/Workshops**
- **Network Academies**
- **Development**
 - Products and Services**
- **Research**
 - Harnessing Intellectual Property**

Successful partnerships are balanced over time

Advanced Internet Partnerships

Research & Education Network Tiers

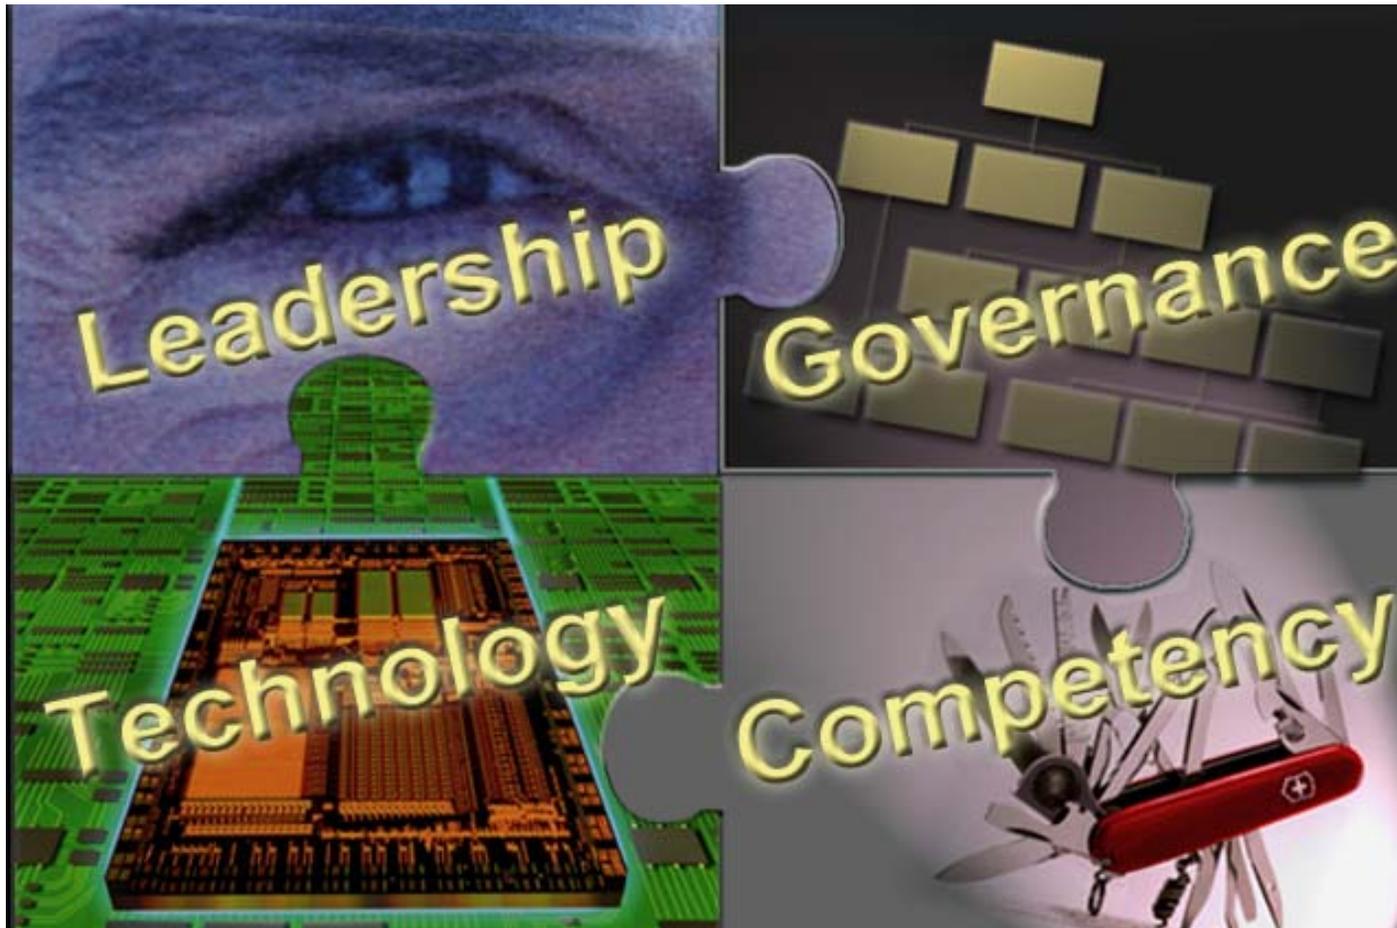

Cisco.com

Readiness

Cisco.com

Learning is not Training

***It is information, communication,
collaboration, and education***

Evolution of US Research Networks

Cisco.com

1988

1993

1998

2003

NSFnet

vBNS

Abilene

NLR

Funding

- NSF

- NSF

- Universities via membership

- Research universities equity ownership

User

- Regionals & backbone

- Supercomputing centers & NAPs; later all research universities

- GigaPoPs and universities

- New generation of 'regionals'

Carrier

- Lease circuits own IP service

- MCI managed ATM and IP service

- Qwest managed Sonet & wave service; own IP service

- Own dark fiber (from Level3), DWDM, Ethernet and IP services

Traffic

- Production with limited experiments

- Production with separate testnet

- Production traffic only

- 'Dual-mission' production and experimental

Every 5 years, US national research networks evolve.

Research & Production Infrastructure

Cisco.com

Infrastructure

1:Fiber 2:Wave 3:Router/Ethernet

Research

breakable, mutable

- Measurement of real user Internet traffic
- Internet BGP
- L2 R&D on complex topologies, not speed
multicast routing
- L1 R&D or dedicated 10G bandwidth R&D
large MTU, XTP
- Dark fiber full spectrum
optical packet switch, optical control plane, IP optics

Production

stable, reliable

- AUP-free use for higher ed & K-12
- inter-Gigapop transit
- dedicated IP service without 10G waves
remote instruments
- dedicated 10G bandwidth
DTF/ETF supercomputer cluster, federal mission

Research and Production environments in the same network

- **Research awards (every fall and spring)**

\$50-100K US

One year in length

Peer-reviewed competition

- **No intellectual property constraints**

- **Communication is central goal**

Standards Bodies

Academic Journals

Dialogue among Researchers and Engineers

Next application deadline is August 2005

URP Proposal and Grant Info

Cisco.com

- **Proposals**

Solicited and unsolicited proposals twice per year

2 page proposals

Sample:

www.cisco.com/warp/public/750/aia/urp/sample.html

- **Awards**

1 year awards; renewable but in competition

Awards range \$20K-\$100K/year/project – average is \$70K; one investigator can have multiple projects

Next submission deadline is August 2005

URP Research Timeline

Cisco.com

- **Supporting 5+ year “risky” or challenging research topics for 25% of awards**
- **Supporting 2-5 year out research topics with strong Business Units interest for 75% of awards**
- **Under 15 months is transitions to CARD**

Basic research explores the future of the Internet.

Cisco “Champions”

Cisco.com

- **Cisco Champions act as technical liaisons between Cisco and funded researchers**
- **Interaction at each stage**

Refine Draft

Review Proposal (lead among peer review)

Aid in Research

Drive Dissemination of Results

- **Early deadline for proposals lacking champions**

Communication is a critical success factor.

Areas for Research and Development

Cisco.com

- **Design Principles**
 - Continued race between packet vs circuit (lambdas)
 - Peering at all layers
- **Intelligence and management**
 - Smart, self managing, self healing, self tuning networks
 - Secure, highly available, fault tolerant networks
- **New Use**
 - Media convergence: data, voice, video
 - Evolving edge: mobile, ubiquitous computing, sensor nets, nano-technologies

Focus is future growth of the Internet.

Getting Started

Cisco.com

- To apply www.cisco.com/go/research
 - 1) Identify your area of interest
 - 2) Visit the Cisco Research website for the application sample
 - 3) Identify a champion who works in your area of interest
If not readily available, we'll help find one.
 - 4) Enter your application online by August 2005;
enter early for a champion match

- **Email: research@cisco.com**

**“Bandwidth” and “degree of connectivity”
are the new measures of power...**

Three distinguishing factors to harness power

- **culture to exploit & share knowledge**
- **competitive setting that embraces change**
- **ability to partner**
